

# Drives for marine and offshore

## Energy efficient reliability on board

Anywhere a motor is used on board is a great opportunity to save energy. Our marine certified variable frequency drives (VFD) regulate the speed and torque of motors so they run accurately according to the demand. From propulsion systems, thrusters, deck machinery, pumps, HVAC systems, to deck cranes, our medium and low voltage drives help you use fuel more efficiently and reduce maintenance needs. Our drives are also key elements of your shaft generators and offshore pipe-laying systems. We provide global support, life cycle services and strong application expertise to help you get the full benefit from our drives.

Equipment quality. Reliable operation. Fuel savings. Everything counts when you depend on your motor-driven applications to do what you expect.
